TECHNICAL SKILLS

Programming: JavaScript, TypeScript, Python, SQL, C

Frontend: React, Vite, Tailwind CSS, HTML

Backend & Database: Supabase, PostgreSQL, .NET

Tools: Git, Docker, Vercel, VS Code

EXPERIENCE

Ontario Ministry of Education

.NET Developer (Co-op)

Toronto, ON • September 2024 - December 2024

- Maintained 10+ HTML/CSS form and dashboard pages across four Ministry reporting collections, updating hard-coded annual fields and content to meet 2025 business requirements through Git-based development, code review, QA, and internal deployment workflows.
- Designed and built a reusable test collection containing shared application components including data-entry fields, file uploads, dropdowns, checkboxes, buttons, and navigation to support pre-release verification across related reporting systems.
- Diagnosed and resolved front-end defects during QA, including a CSS styling conflict that caused component-level changes to be overridden, researching the issue independently and implementing the validated fix.

IT QA Assistant (Co-op)

Toronto, ON • January 2024 - August 2024

- Created and executed 20+ HP ALM test cases per release for Ontario school data-collection systems, validating workflows, submissions, and access permissions.
- Identified and documented 10+ defects per release with reproducible steps and expected results, helping developers diagnose and resolve issues efficiently.

Fresh City Farms

Quality Assurance Tester (Co-op)

Toronto, ON • January 2023 - April 2023

- Performed cross-browser and mobile testing for a five-page web application and logged 50+ Jira defects with reproducible steps, screenshots, and expected-versus-actual behavior.

PERSONAL PROJECTS

ApplyTrack | React, Supabase, PostgreSQL, TypeScript [Live Demo](#)

- Built a full-stack job application platform managing 300+ application records using React, Supabase Auth, PostgreSQL, and Row Level Security, with pipeline views, analytics, and Excel import with data normalization.
- Engineered an event-driven Job Agent using TypeScript Supabase Edge Functions and signed Resend webhooks to ingest LinkedIn/Indeed job alerts, parse job data, deduplicate records, and upsert leads into a user-controlled review queue.
- Implemented secure account and data workflows including user-scoped database policies and rate-limited password recovery with redirect validation, Supabase Admin APIs, and Resend email delivery.

French Desk | React, Supabase, PostgreSQL, OpenAI API [Live Demo](#)

- Built a full-stack French learning platform managing 2,000+ vocabulary and learning records using React, Supabase Auth, PostgreSQL, and Row Level Security, with persisted user preferences and daily learning state.
- Engineered an authenticated Vercel serverless AI pipeline that validates French entries with Wiktionary, enforces per-user usage limits, and generates structured vocabulary data through the OpenAI Responses API using a strict JSON schema.
- Developed confidence-based study, quiz, and bulk-import workflows with deduplication, persistent daily progress, automatic mastery progression, retry/cancellation handling, and 14 unit tests covering core learning, import, and rich-text behavior.

EDUCATION

Trent University | GPA: 4.0/4.0

Master of Science, Applied Modelling and Quantitative Methods

September 2025 - August 2026

Peterborough, ON

University of Toronto | GPA: 3.4/4.0

Honours Bachelor of Science, Computer Science Specialist

September 2020 - August 2025

Toronto, ON
