Web Development: HTML, React, .NET
Tools & Technologies: Git, Docker, VS Code, HP ALM, Jira

EDUCATION

Trent University <i>Master of Science in Applied Modelling and Quantitative Methods</i> Areas of Interest: Big Data, Artificial Intelligence, Data Science	Peterborough, ON <i>Expected Graduation: August 2026</i>
--	--

University of Toronto Honors Bachelor of Science (Co-op) Computer Science Specialist	Toronto, ON September 2020 – August 2025
--	--

EXPERIENCE

Ontario Ministry of Education .NET Developer (Co-op) - Contributed to the development and maintenance of web-based data systems supporting Ministry initiatives including Identity and Access Management (IAM), Ontario School Year Calendar (OSYC), and the Math Achievement Action Plan (MAAP). - Updated annual data collection forms and dashboards to align with 2025 reporting requirements, modifying form fields, labels, and validation rules based on evolving business requirements. - Developed a comprehensive testing dashboard containing key system features to support regression testing and ensure system functionality before deployments. - Collaborated with developers and QA teams to identify, diagnose, and resolve software defects, improving system stability and reliability.	Toronto, ON September 2024 – December 2024
--	--

Ontario Ministry of Education IT QA Assistant (Co-op) - Performed manual testing for web-based data collection systems used by Ontario schools to submit student enrollment, course participation, and funding request data. - Executed test cases using HP ALM to validate application functionality, user workflows, and data submission processes. - Tested role-based access controls by validating login permissions for different user types. - Documented and tracked software defects in HP ALM, providing clear reproduction steps and expected outcomes to support efficient debugging by developers.	Toronto, ON January 2024 – August 2024
---	--

Fresh City Farms Quality Assurance Tester (Co-op) - Developed and executed manual test cases to validate functionality and performance across multiple pages of the Fresh City Farms website. - Identified and documented software defects using Jira, providing clear reproduction steps, screenshots, and expected versus actual behavior to support efficient debugging. - Performed cross-browser and cross-device testing (Chrome, Firefox, mobile devices) to ensure consistent user experience across platforms.	Toronto, ON January 2023 – April 2023
